2. Citations and explanations

Reference is made to the following documents:

D1: PATENT ABSTRACTS OF JAPAN Vol. 1999, No. 09, 30 July 1999 (1999-07-30) & JP 11 091040 A (POLYPLASTICS CO) 6 April 1999 (1999-04-06)

D3: MatWeb.com, The Online Materials Database: Overview EVA, Adhesive/sealant Grade (<http://www.matweb.com>); Copy joined.

A Amendments

The amendments submitted by the applicant with the letter of 23 November 2004 are allowed and in particular satisfy PCT Article 34(2)(b).

B Novelty

B.1 Document D1 discloses a co-extruded or dry-laminated laminate for the production of, *inter alia*, containers and pipes [0028-0033] and having the following structure: polyacetal (POM) // adhesion promoter // HDPE (example [0035-0039]). The adhesion promoter can be, for example, a copolymer consisting of an alpha-olefin and (meth)acrylic acid (alkylester), vinyl acetate, maleic acid (anhydride)

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/EP 03/12210

or itaconic acid (anhydride) etc., or a modified alpha-olefin (for example maleic acid anhydride-modified polyethylene) ([0017-22], [0035]).

In document D1 the composite adhesion is given in N/15mm (Table 1) and not, as in the application, in N/mm². Consequently, no direct comparison is possible. However, since in document D1 composite adhesion plays a decisive role [0004] and the structure is encompassed by the subject matter of the materials listed in claim 1, the Preliminary Examining Authority considers that the examples given in document D1 are prejudicial to the novelty of the subject matter of claim 1 of the present application (PCT Examination Guidelines 2004, paragraph 12.04).

Ethylene vinyl acetate copolymers usually have Vicat softening points above 50°C (see, for example, document D3).

The polyacetal in document D1 contains in addition a polyalkylene glycol modified with amino groups [abstract]. However, the presence of this component is not excluded by claim 1 of the present application.

Consequently, the subject matter of claims 1-8, 10-14, 16-19 and 21 is not novel (PCT Article 33(2)).

C Inventive step

The features of claims 9 and 20 concern only one of several obvious possibilities. In the view of the examiner, the application did not demonstrate that these features solve a technical problem in an inventive (surprising) manner.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/EP 03/12210

The subject matter of claims 9 and 20 is therefore not inventive within the meaning of PCT Article 33(3).

D Industrial applicability

The subject matter of claims 1-23 meets the requirements for industrial applicability of PCT Article 33(4).
